

How to set up your Pro-Life Banners

Materials: 2 frames with pro-life banners attached and 4 blue bungee cords

Personnel: 5 people (coordinator plus 2 people per banner)

Step 1

Transport the frames with attached banners to the foot of the bridge, and then unroll the banner from one of the frames and swing out the PVC legs.

NOTE: You will set up each banner following Steps 1-3 before walking it onto the bridge.

Step 2

Move the green zip ties over the top left and top right corners of the frame to secure the banner on the left and right legs, as pictured.

Step 3

Hook a bungee cord through the hole on each leg of the frame, and then attach the other ends of the bungees to the grommets on the bottom corners of the banner.

Step 4

Carefully walk the banner onto the bridge and position above the center of the highway lanes, facing oncoming traffic. In some cases the banner may have to be positioned to right or left of center to avoid any obstruction from highway signs or bridge fencing.

NOTE: The two people holding the banner should have a combined weight of at least 300 lbs.

Also remember:

- *Pray, smile and wave!*
- *Be friendly to passersby.*
- *Ignore any negative reactions.*
- *Enjoy reaching thousands in your community!*

Step 5

IMPORTANT: Each leg of the banner frame should be held securely with one or two hands above the midline, and a foot pressing the bottom of the leg against the bridge barrier, as pictured.
